I-bars show sample standard deviation for TFE n=3; Tiny TFE and all SPU panels are n=1. Top: complete TFE accuracy-time trajectories. Bottom: genuine final SPU utility/time endpoints; near-flat post-Stage-B releases are not joined into pseudo-convergence curves. All x values are measured cumulative online secure minutes on linear, unbroken axes; T@Target values are in the audited companion table. Backend rows are not hardware-normalized.
