
I-bars show sample standard deviation for TFE n=3; Tiny TFE and all SPU panels are n=1. Top: original TFE log-seconds trajectories with sample-SD I-bars (n=3 where available). Bottom: SPU short-axis windows in minutes, retaining all genuine 8/2/18 releases per method. Diagonal marks omit only the empty interval between Ours and Full windows; absolute T@Target uses the original cumulative times. Backend rows are not hardware-normalized.
